Wintersemester/winter semester 2024/25

This is a seminar on contemporary topics in industrial organization, including applied analysis of merger control, value of new goods, market entry, search markets, and network effects. It is strongly recommended that the students have taken the M6 course on Empirical Industrial Organization in summer 2024, because structural estimation plays an important role in the papers selected for this seminar. The goal of this seminar is to learn about the research frontier in industrial organization and to familiarize oneself with methods for use in research along with research questions.
